

## How to take care of your eye drops

1. Try not to touch the end of the dropper or allow it to touch your eyelid or lashes
2. Avoid breathing on the end of the dropper
3. Do not allow anyone else to use your eye drops
4. Always wash your hands before and after using the eye drops
5. Recap the bottle immediately after you have used the drops and store upright in a cool dark place
6. The eyedrops should be thrown away after the treatment is finished. If treatment is for longer than 4 weeks a fresh bottle should be obtained every 28 days.
